

UNCENSORED

Think for yourself.

Is the Government planning to force you to have a

CONTAMINATED VACCINE ?

Many scientists are now saying that the "Swine Flu" (H1N1) vaccine is more dangerous than the virus itself. And that the VACCINE could help SPREAD a more deadly form of the flu virus or give people serious neurological illnesses.

Did you know ...

In February 2009, Baxter International, a major contractor for the "Swine Flu" vaccine, CONTAMINATED 72 kg of the seasonal flu vaccine with LIVE BIRD FLU VIRUS.

They then distributed the contaminated vaccine material to 16 countries.

It was about to be released to the general public when alert laboratory staff in the Czech Republic discovered the problem, and averted what could have become a lethal pandemic. Baxter admitted the contamination, but claimed that it was an "accident".

But was it really an accident? Many people are beginning to doubt it. For an "accident" like

this to happen would have required a serious breach of its Level 3 Biosafety Containment protocols.

It's a HUGE story. But mainstream media has been silent on it – as well as the fact that criminal charges have been brought against Baxter, the UN and WHO – *for terrorism likely to lead to genocide.*

Incredibly, the NZ government has contracted with Baxter for an initial 300,000 doses of their still unproven "Swine Flu" (H1N1) vaccine. And WHO is pushing for MANDATORY (forced) VACCINATION in 194 countries.

WHY???

“This strain of swine influenza (may have been) cultured in a laboratory...something that’s not been seen anywhere actually in the United States and the world...”

– Dallas County Medical Director Dr. John Carlo

The Plot

By the beginning of 2009 it had become apparent that the Bird Flu virus was not spreading much beyond birds. Business-wise, the pandemic was a fizzle and the Great Bird Flu (H5N1) Pandemic Panic of 2009 was simply not panning out.

To a vaccine company eager to sell millions of vaccines, Bird Flu was a loser.

However, if combined with the highly transmissible human to human “Seasonal Flu” virus, Bird Flu could be made to spread widely into the human population – and cause a pandemic after all.

The *Toronto Sun* reported that “While H5N1 doesn’t easily infect people, H3N2 viruses do. If someone exposed to the two had been simultaneously infected with both strains, he or she could have served as an incubator for a hybrid virus able to transmit easily to and among people.”

As mentioned above, Baxter ADMITTED to having contaminated the Seasonal Flu vaccine with the live Bird Flu virus, but claimed that the whole thing had been an “accident” – *even though accidents like this one are virtually impossible in their Level 3 Biosafety containment.*

However, given the high fatality rate of H5N1 it was an “accident” that could have killed millions of people. Had it not been stopped by alert scientists in the Czech Republic, it could have been a catastrophe – *but very good for the \$50 billion a year vaccine business.* The contaminated “Seasonal” flu vaccine could have spread the new, more serious “New Improved” Bird Flu, thus creating the panic market for Bird Flu vaccines!

However, thanks to the Czech scientists who spotted the contamination in the nick of time, the Bird Flu pandemic did not materialise.

The “Swine Flu”

Conveniently for Baxter, “Swine Flu” suddenly “popped up” on the unsuspecting people of Mexico. *And the fizzling Bird Flu Pandemic was reborn as The Swine Flu Pandemic.* Just as conveniently, Baxter, Novartis and others just happened to be “ready” with patented vaccines.

One Austrian journalist, Jane Burgermeister, who has been spearheading the investigation of Baxter and others who may be in on the conspiracy, has recently filed criminal charges with the FBI against the company. She also

brought charges against the WHO and the UN for conspiracy to commit genocide. It is that serious.

Is This Just “Conspiracy Theory”?

We wish it were. But as the evidence pours in to support these charges, more and more people – including scientists and doctors, are taking a new look at the vaccine industry.

They now think that this new “Swine Flu” pandemic (and several others before) is “man made” biowarfare against the people of the world. Even the *New England Journal of Medicine* has written that the “Swine Flu” was “possibly” made in a laboratory. (Then WHO supplied the virus to Baxter.) In addition, in the April 30, 2009 issue of *Nature*,

a virologist was quoted as saying, “Where the hell it got all these genes from we don’t know.” Extensive analysis of the virus found that it contained [genes from] the original 1918 H1N1 flu virus, the avian flu virus (bird flu), and two new H3N2 virus genes from Eurasia. Debate continues over the possibility that swine flu is a genetically engineered virus.

In fact, US scientists actually dug up some corpses of people who had died of flu in 1918 and have been working for several years to **recreate** the 1918 flu virus.

Can Vaccines Actually CAUSE Disease?

FACT: H1N1 VACCINES may cause serious illnesses – if only thanks to SQUALENE-based adjuvant and/or other toxic ingredients (including mercury). Remember the “Gulf War Syndrome” which incapacitated thousands of men and women in the US Army? It was reliably traced back to Squalene and other harmful substances in vaccines. Vaccines can also cause a host of other diseases – from diabetes to cancer. This is another “inconvenient truth” that doctors don’t tell you.

However, vaccine companies have continued to make harmful vaccines, regardless of the consequences. In fact, they have had laws passed in Europe, the USA and Japan, to allow **compulsory vaccination of the population** “in the event of a pandemic”. For vaccine companies it means that the declaration of a pandemic could produce a financial windfall – since the whole population may then be forcibly injected with their vaccine – **regardless of whether or not it has been proven to be effective or safe.**

One German doctor now thinks that the “Swine Flu” vaccine could cause

“Debate continues over the possibility that swine flu is a genetically engineered virus.”

– Dr Russell Blaylock, Neurologist

“6-8% of Swine Flu DNA matches no virus on record.” – Dr William Deagle

cancer, as some other vaccines – contaminated with SV40, a cancer causing monkey virus – have done.

And there has been no serious testing of any of the “Swine Flu” vaccines. Nor are any scheduled. They are being rushed into production with “fast tracked” approval.

That’s not all. In the USA legislation was passed that gives vaccine companies **legal indemnity**, making it impossible for people to sue for damages if they (or a family member) suffer from injuries – or die – as a result of their injection with the swine flu vaccine.

Why are governments spending billions of dollars on a vaccine that is still in development, has not been adequately tested and is being made by a company under criminal investigation for contaminating their product to **START A SERIOUS PANDEMIC**. Why, indeed?

DON’T TAKE THE SHOT!!!

Some “Swine Flu” vaccines could well be “weaponised” – designed to kill you or give you a serious chronic illness. Their ingredients are still largely unknown. Would you trust a vaccine company (or a government) that won’t tell you what’s in the vaccine they want to force you to take?

Jane Burgermeister has done the world a great service by exposing the “Baxter Incident” and bringing criminal charges against the perpetrators. Now people must **WAKE UP** and **REJECT** these dangerous vaccines.

While the NZ Government is currently stating that the vaccine won’t be “compulsory”, they are under pressure from WHO and NZ vaccine-oriented officials to do precisely that. The Health Act 1956 gives the Medical Officer of Health the power to quarantine people until they have had “preventative treatment”, which could well include vacci-

nation. This same Act in NZ empowers police to use force to assist in carrying out directions from the Medical Officer of Health.

WHAT YOU CAN DO NOW:

Ring or email your MP and The Hon Tony Ryall, Minister of Health. Tel (04) 817 6804 or email his office here:

Peter.Maciver@parliament.govt.nz.

Tell them **NOT TO USE BAXTER VACCINE WHILE THE COMPANY IS FACING CRIMINAL CHARGES!** Tell them to **DISCLOSE THE VACCINE INGREDIENTS!!!!** This vaccine is not **SAFE**, and whether compulsory or voluntary it is **NOT ACCEPTABLE**. Other countries (like the Czech Republic) have cancelled their contracts with Baxter, and so can New Zealand.

Vaccine Dangers – The Evidence*

Under the 1986 US National Childhood Vaccine Injury Act, VAERS (Vaccine Adverse Events Reporting System) was established. Annually, it reports about 11,000 serious vaccine reactions, including up to 200 deaths and many more permanent disabilities.

Far more alarming is the following:

• The FDA estimates that only 1% of serious adverse reactions are reported; • CDC says it’s 10%;

• Medical school students testified before Congress that they’re told not to report these incidents. According to the National Vaccine Information Center (NVIC), only one in 40 New York doctors reported adverse vaccine reactions or deaths;

• International studies show up to 10,000 US SIDS (Sudden Infant Death Syndrome) deaths annually, and at least half of them are from vaccines. • Another study determined that 3000 US children die annually from vaccines;

• Poor reporting in America suggests that annual adverse vaccine reactions, in fact, number from 100,000 – one million;

• Since 1988, the government’s National Vaccine Injury Compensation Program (NVICP) paid families of affected children \$1.2 billion in damages;

• In 2004, a study that reviewed data from the Centers for Disease Control and Prevention’s (CDC) Vaccine Data Link, concluded that children who receive thimerosal-containing (mercury) vaccinations are 27 times more likely to develop autism than children who do not. The Swine Flu” vaccines contain thimerosal.

• As authorized by the 2006 Public Readiness and Emergency Preparedness (PREP) Act, HHS Secretary Sebelius, granted drug companies **legal immunity** (except for impossible to prove willful misconduct) to proliferate dangerous, untested Swine Flu vaccines globally;

• In settling vaccine damage suits, drug companies impose gag orders to keep vital information from the public; and

• Insurers refuse to cover adverse vaccine reactions because of the high potential liability they’d face.

* **NZ** uses many of the same vaccines as the US

Are Vaccines Effective? – The Evidence

Some Serious Questions About Vaccines

Although vaccines stimulate antibody production, no evidence suggests that this alone assures immunity. A 1950 British Medical Council-published study found **no relationship between antibody count and disease incidence**. Natural immunization involves many bodily organs and systems. Artificially producing antibodies can't achieve it.

Research also shows how squalene adjuvants harm the human immune system, making it susceptible to numerous illnesses and diseases, ranging from very annoying to life threatening. In addition, the "herd immunity" notion of mass-vaccination effectiveness is largely discredited. Just the opposite is true as evidence shows that **fully vaccinated populations have experienced epidemics numerous times in the past**.

Further, vaccine effectiveness "remains scientifically unproven" because **no double blind studies have been conducted to do it**. Significantly, recent disease outbreaks have affected more vaccinated children than unvaccinated ones. And the common practice of "one size fits all" is troublesome. It lets tiny new-borns get the same dosage as a five year old. It tolerates dubious quality control practices producing what's known as "Hot Lots" - ones associated with disproportionately high death and disability rates.

Shockingly, the FDA refuses to act preventatively against them. In fact, individual vaccine lots have almost never been recalled even when associated with severe adverse reactions. Instead, they're administered under the assumption that all recipients respond the same, regardless of gender, ethnicity, genetic makeup, or other characteristics.

A recent *New England Journal of Medicine*-reported study found that a significant number of Romanian children receiving polio vaccine contracted the disease. The use of antibiotic IM injections increased the risk substantially.

Long Term Problems

Documented long-term health problems include arthritis, chronic headaches, rashes indicative of disease, non-healing skin lesions, seizures, autism, anaemia, multiple sclerosis, ALS, cancer, and many others. Ingredients common to all vaccines are at issue. Squalene adjuvants are a biological time bomb that can harm or destroy the human immune system.

Other ingredients are known toxicants and carcinogens, including thimerosal (a mercury derivative), aluminium phosphate, formaldehyde, phenoxyethanol, and numerous gastrointestinal toxicants like liver toxicants, cardiovascular and blood toxicants, and reproductive toxicants. **"Chemical ranking systems rate many vaccine ingredients among the most hazardous substances"** known, even in microscopic doses.

Millions of children (and adults) are partaking in an enormous crude experiment, and no sincere, organized effort is being made to track the negative side effects or to determine the long-term consequences.

Dr. Bart Classen's epidemiological research found vaccines as the cause of 79% of insulin type I diabetes cases in children under 10. The sharp rise in numerous other diseases may also be linked with mass-vaccinations. California's autism rate skyrocketed 1000% in the last 20 years. In the 1990s, MMR vaccine usage in Britain (for measles, mumps and rubella) occurred at the same time autism rose sharply. **The January 2000 Journal of Adverse Drug Reactions reported that no adequate testing was done, so the vaccine never should have been licensed**.

New research may reveal other unknown hazards, but public safety won't be addressed until government health officials act responsibly, report accurately, and adequately protect their populations from vaccines they never should allow.

Long-term vaccination reactions have been suppressed and ignored in spite of the alarming correlation between their use and the rise of auto-immune and other diseases. Vaccines aren't for protection. They're for profit and other nefarious purposes. Avoiding them is essential to protecting human health and well-being.

Full coverage of this and other issues of great importance can be found in the new edition of UNCENSORED magazine, at all good bookstores, supermarkets and other outlets.
